Outlook

- Large Hadron Collider
 - proton-proton collisions, pileup, event size, bandwidth and triggering.
- ATLAS detector
 - Calorimeters : electromagnetic and hadronic
- Jet definition, reconstruction and calibration
 - jet algorithms, infra-red stability, pileup mitigation, topo-clusters, jet energy calibration
- Jet cross-section measurements at 13 TeV
 - trigger strategy, event selection, detector effects, theory model, quantitative data to theory comparison
- Searches for a low-mass dijet resonance at 13 TeV
 - trigger strategy, data analysis, fit model, interpretation

Jet life

Final JES precision

Final JES precision

Name	Description	Category
Z+jet		
e E-scale material	Material uncertainty in electron energy scale	det.
e E-scale presampler	Presampler uncertainty in electron energy scale	det.
e E-scale baseline	Baseline uncertainty in electron energy scale	mixed
e E-scale smearing	Uncertainty in electron energy smearing	mixed
μ E-scale baseline	Baseline uncertainty in muon energy scale	det.
μ E-scale smearing ID	Uncertainty in muon ID momentum smearing	det.
μ E-scale smearing MS	Uncertainty in muon MS momentum smearing	det.
MC generator	Difference between MC generators	model
JVF	JVF choice	mixed
$\Delta \phi$	Extrapolation in $\Delta \phi$	model
Out-of-cone	Contribution of particles outside the jet cone	model
Subleading jet veto	Variation in subleading jet veto	model
Statistical components	Statistical uncertainty	stat./meth.
γ +jet		
γ E-scale material	Material uncertainty in photon energy scale	det.
γ E-scale presampler	Presampler uncertainty in photon energy scale	det.
γ E-scale baseline	Baseline uncertainty in photon energy scale	det.
γ E-scale smearing	Uncertainty in photon energy smearing	det.
MC generator	Difference between MC generators	model
$\Delta \phi$	Extrapolation in $\Delta \phi$	model
Out-of-cone	Contribution of particles outside the jet cone	model
Subleading jet veto	Variation in subleading jet veto	model
Photon purity	Purity of sample in γ +jets	det.
Statistical components	Statistical uncertainty	stat./meth.
Multijet balance		
α selection	Angle between leading jet and recoil system	model
β selection	Angle between leading et and closest subleading jet	model
MC generator	Difference between MC generators (fragmentation)	mixed
$p_{\rm T}$ asymmetry selection	Asymmetry selection between leading and subleading jet	model
Jet p_T threshold	Jet $p_{\rm T}$ threshold	mixed
Statistical components	Statistical uncertainty	stat./meth.

Proton-proton collisions : final state truth at the particle-level

э

Proton-proton collisions : final state truth at the fixed order

$$\begin{split} \sigma\left(h_{1}h_{2}\rightarrow \mathbf{Z}\mathbf{H}+X\right) &= \sum_{n=0}^{\infty} \alpha_{s}^{n}\left(\mu_{R}^{2}\right) \sum_{i,j} \int dx_{1}dx_{2} f_{i/h_{1}}\left(x_{1},\mu_{F}^{2}\right) f_{j/h_{2}}\left(x_{2},\mu_{F}^{2}\right) \\ &\times \hat{\sigma}_{ij\rightarrow \mathbf{Z}\mathbf{H}+X}^{(n)}\left(x_{1}x_{2}s,\mu_{R}^{2},\mu_{F}^{2}\right) + \mathcal{O}\left(\frac{A^{2}}{M_{W}^{4}}\right), \end{split}$$

э

Proton-proton collisions : final state (visible by an ideal detector)

(actual final-state multiplicity ~ several hundred hadrons)

Pavel Starovoitov	(KIP HD)

Total cross section

 $\sigma_{\text{total}} = \sigma_{\text{elastic}} + \sigma_{\text{single-diffractive}} + \sigma_{\text{double-diffractive}} + \dots + \sigma_{\text{non-diffractive}}$

- Experimentally minimum bias ≈ all events with no bias from trigger conditions
- Theoretically $\sigma_{\min-bias} \approx \sigma_{double-diffractive} + \sigma_{non-diffractive}$

Hard scattering + Underlying event

The underlying is the additional activity from soft interactions in additional to the primary hard partonic process.

Underlying event

 If the interactions occur independently obeys Poissonian statistics

$$P_n = rac{\langle n
angle^n}{n!} e^{-\langle n
angle}$$

 However energy-momentum conservation tends to suppressed large numbers of parton scatterings.

Underlying event (color correlation)

Pavel Starovoitov (KIP HD)

Physics at the LHC
